

Although XM Instant Traffic & Weather is not yet available in Atlanta, I have listened to other city broadcasts when I drive into that city. With XM Radio I do not have to search for local radio station that are broadcasting traffic reports. All I have to do is dial in that city on XM Radio.

XM Radio offers traffic and weather for certain markets 24/7. Not every 10 minutes during prime time like most radio stations in markets. Radio stations need to start listening to their local audiences to compete instead of asking the government to restrict thier competitors.

Please, reject the NAB's petition 04-160 and let the audience decide what to listen to not NAB.
